

KAILIS BROS ENVIRONMENTAL PROTECTION POLICY

At Kailis Bros, our objective is to ensure that we operate to world's best practice. This has and is continually achieved by the following:

1. Minimise the risk of on-site and off-site contamination through appropriate storage, treatment and handling of chemicals and wastes.
2. Ensure and maintain efficient management of Power and Water facilities.
3. Minimise volumes and types of waste generated through ongoing recycling processes (fish waste, packaging – both cardboard and plastic).
4. Minimise the use of chemicals through alternative sanitisation practices (through the use of enzymes).

We seek to procure the products we market from environmentally managed supply sources. We seek to package goods in a manner so as to minimize the long term impact of their supply. We are signatories to the National Packaging Covenant and possess custodian status under the Marine Stewardship Council covenant. We seek to utilise equipment and systems that comply with Australian and internationally recognized environmental standards.
